Coding & Solution

Date	05 October 2026
Team ID	SWTID-2026-5240
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Vaishnavi-R/ServiceNow-IT-Procurement-Flow-Designer
Programming Language(s)	JavaScript (ServiceNow Server-side Scripting & Flow Designer Actions)
Framework(s) Used	ServiceNow Platform Engine, Flow Designer Framework
Key Features Implemented	• Automated trigger configuration upon Service Catalog Request (RITM) approval. • Automated Catalog Task (sc_task) creation. • Automatic assignment to the **Hardware** group. • Setting standard short description: *"Laptop need to Configured"*. • Real-time request status and task state updates.

Pending / Incomplete Features	None. All primary procurement workflow requirements are fully implemented and verified.
Setup / Run Instructions	1. Import the Update Set (sys_remote_update_set) into your ServiceNow Personal Developer Instance (PDI). 2. Preview and Commit the Update Set. 3. Open **Flow Designer** and verify the **Standard Laptop Task** flow status is set to *Published*. 4. Navigate to **Service Catalog** → Hardware → **Standard Laptop**. 5. Place a test order, approve the RITM record, and verify automatic sc_task creation and routing.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

- **Workflow configuration and platform update sets are maintained in the GitHub repository.**
- **Implementation uses ServiceNow native Flow Designer no-code/low-code actions, ensuring optimal performance, easy maintainability, and upgrade compatibility.**
